Question 97	
Answer saved Marked out of 1.00	
nance out of 130	
Decomposers help in	
Select one or more:	
✓ A. Breaking dead waste	
☑ B. Recycle nutrients	
☐ C. Spreading decay	
☐ D. Increasing oxygen level in the atmosphere	
Question 98	
Answer saved	
is a quantitative measure of the amount of dissolved oxygen required for the example, nitrogen in ammonia, and organic nitrogen in wastewater.	ne biological oxidation of nitrogenous material, for
is a quantitative measure of the amount of dissolved oxygen required for the	ne biological oxidation of nitrogenous material, for
example, nitrogen in ammonia, and organic nitrogen in wastewater. 5 day BOD tests are not affected by ✓ A. Nitrogenous biological oxygen demand ✓ B. Nitrification.	ne biological oxidation of nitrogenous material, for
is a quantitative measure of the amount of dissolved oxygen required for the example, nitrogen in ammonia, and organic nitrogen in wastewater. 5 day BOD tests are not affected by A. Nitrogenous biological oxygen demand B. Nitrification. C. Denitrification. D. ThOD	ne biological oxidation of nitrogenous material, for

Nitrogenous biological oxygen demand B. Nitrification. C. Denitrification. D. ThOD tuestion 99 nswer saved darked out of 1.00 Which of the following are earth sustaining forms of economic development?	ne biological oxidation of nitrogenous material, for
is a quantitative measure of the amount of dissolved oxygen required for the example, nitrogen in ammonia, and organic nitrogen in wastewater. 5 day BOD tests are not affected by 2 A. Nitrogenous biological oxygen demand 3 B. Nitrification. 4 C. Denitrification. 5 D. ThOD Cuestion 99 Answer saved Marked out of 1.00 Which of the following are earth sustaining forms of economic development? 4 A. Using solar energy	ne biological oxidation of nitrogenous material, for
	ne biological oxidation of nitrogenous material, for

Access and Marked out of 100 The saturated value of DO in water is of the order and minimum DO required for healthy fish population is A 8 to 15 mg/l B 5 to 15 mg/l Consists 101 Accessor 101 Accessor 101 Accessor 101 Accessor 101 Accessor 101 Accessor 100 Which of the following are point sources of water pollution? A Sewage treatment plants B Land fills C Reads D Agricultural runoff Consists 100 The basic types of control technologies which work on combustion are: A Thermal incineration B Catalytic oxidation C Surface condensers D Surface condensers Comprehensive examination on 07-05-21 Notice Jump 10 C Comprehensive examination on 07-05-21 Notice		
The saturated value of DO in water is of the order and minimum DO required for healthy fish population is A. 8 to 15 mg/l B. 5 to 15 mg/l Cuestion 101 Answer saved Marked out of 1 100 Which of the following are point sources of water pollution? A. Sewage treatment plants B. B. Land fills C. Roads D. Agricultural runoff Cuestion 102 Answer saved Marked out of 1 100 The basic types of control technologies which work on combustion are: A. Thermal incineration B. Catalytic oxidation C. Surface condensers D. Surface condensers	Answer sa	ved
	Marked of	
□ B. S to 15 mg/l □ C. S to 8 mg/l □ D. S to 10 mg/l Cuestion 101 Answer saved Marked out of 1,00 Which of the following are point sources of water pollution? □ A. Sewage treatment plants □ B. Land fills □ C. Roads □ D. Agricultural runoff Cuestion 102 Answer saved Marked out of 1,00 The basic types of control technologies which work on combustion are: □ A. Thermal incineration □ B. Catalytic oxidation □ C. Surface condensers □ D. Surface condensers □ D. Surface condensers	The sa	turated value of DO in water is of the order and minimum DO required for healthy fish population is
© C. 5 to 8 mg/l □ D. 5 to 10 mg/l Cuestion 101 Answer saved Marked out of 1.00 Which of the following are point sources of water pollution? ☑ A. Sewage treatment plants ☑ B. Land fills □ C. Roads □ D. Agricultural runoff Cuestion 102 Answer saved Marked out of 1.00 The basic types of control technologies which work on combustion are: ☑ A. Thermal incineration ☑ B. Catalytic oxidation □ C. Surface condensers □ D. Surface condensers ☑ Comprehensive examination on 07-06-21 Notice Jump to	✓ A.	. 8 to15 mg/l
□ D. 5 to 10 mg/l Cuestion 101 Answer saved Marked out of 100 Which of the following are point sources of water pollution? ☑ A. Sewage treatment plants ☑ B. Land fills □ C. Roads □ D. Agricultural runoff Cuestion 102 Answer saved Marked out of 100 The basic types of control technologies which work on combustion are: ☑ A. Thermal incineration ☑ B. Catalytic oxidation □ C. Surface condensers □ D. Surface condensers □ D. Surface condensers ☑ Comprehensive examination on 07-06-21 Notice Jump to	□ B.	. 5 to 15 mg/l
Cuestion 101 Answer saved Marked out of 1:00 Which of the following are point sources of water pollution? A Sewage treatment plants B. Land fills C. Roads D. Agricultural runoff Cuestion 102 Answer saved Marked out of 1:00 The basic types of control technologies which work on combustion are: A Thermal incineration B. Catalytic oxidation C. Surface condensers D. Surface condensers Comprehensive examination on 07-06-21 Notice	✓ C.	. 5 to 8 mg/l
Answer saved Marked out of 1:00 Which of the following are point sources of water pollution? A Sewage treatment plants B Land fills C Roads D Agricultural runoff Cuestion 102 Answer saved Marked out of 1:00 The basic types of control technologies which work on combustion are: A Thermal incineration B Catalytic oxidation C Surface condensers D Surface condensers Comprehensive examination on 07-06-21 Notice	_ D	. 5 to 10 mg/l
